BENCHMARKS	TULIP SOLUTION
Consistent reactivity on slide and tube test	Blend of two different monoclonal antibodies A & B High potency and high avidity Reactive with strong and weak cells
Confidence of reactivity with weakly expressed antigenic samples	Anti-A and Anti-B antibodies characterized to react with different epitopes of A and B antigens
Prevent interference of complement	Optimum concentration of chelating agent Prevents hemolysis of red blood cells under test
Maintenance of optimum pH and ionic strength	Buffer with broad buffer capacity Ensures right conformational fit between antigen and antibody
Protect and preserve antibody activity	Optimum concentration of stabilizers Preserves antibody activity for long term usage and storage
Optimum protein concentration	Well balanced to maintain optimal reactive conditions
