Color-Change Cold Racks

24 PLACER

Description

PCR low temperature cooler, which can meet the requirements of your working temperature such as 4 °C, -21 °C, -55 °C, is the best choice for protecting, transporting and storing sensitive samples and stopping the reaction safely.

Features

- ✓ No need to melt in an ice bath to reduce the risk of contamination.
- ✓ Maintain the temperature at 4 °C -21 °C -55 °C for an extended period of time up to 3 hours.
- ✓ Temperature color change function, when the temperature exceeds 7 °C, ice box cap color from blue to white, according to the temperature change shows different colors.
- ✓ Specially designed hole to avoid freezing the sample.

Metal Type Cold Racks

24 PLACER

Description

CoolRack XT M24 modules are precision-engineered sample modules manufactured from a novel thermo-conductive alloy material, designed to evenly distribute temperature across all wells providing uniform and consistent temperature to all samples ($\pm 0.1^{\circ}\text{C}$).

Features

- ✓ Removes all problems created by placing sample directly in ice: variable sample temperature, wet labels, contamination risk
- ✓ All samples $<4^{\circ}\text{C}$ and uniform in temperature ($\pm 0.1^{\circ}\text{C}$)
- ✓ Samples organized, secure and dry
- ✓ All tubes upright and indexed
