Histo-Blade Disposable blades for Microtome

IVD	Dispositivo medico diagnostico in vitro	Produttore: Histo-Line Laboratories Srl
-----	-----------------------------------------	-----------------------------------------

Codice CND: W05030599

Microtome disposable blades, which are aimed to section the specimens at certain stable thickness, require technical expertise such as sophisticated heating process, excellent polishing and coating techniques. It is also required to maintain the high quality under precise controls with inspection instruments.

REF.	ITEM	DESCRIPTION	PACKAGE
R43351	LP35H	Blade for routine sections with increased durability. It guarantees a high quality of the sections and excellent sharpness with high life of the blade. Short trimming. Material: Stainless steel Length: 80 mm. Height 8 mm. Blade thickness: 0,25 mm Edge angle: 35°	50 blades in ABS dispenser. External box in paper vinyl coated
R43361	LP35S	Blade for routine sections with increased sharpness. It guarantees a high quality of the sections and excellent sharpness with good life of the blade. Ribbon sectioning. Material: Stainless steel Length: 80 mm. Height 8 mm. Blade thickness: 0,25 mm Edge angle: 35°	50 blades in ABS dispenser. External box in paper vinyl coated

Warning and precautions:

- Method of use: the product is particularly sharp. The use of cut resistant gloves is recommended.
- Product classification: the product is intended for use by specialized technical personnel. the product is not classified as chemically hazardous.
- Disposal after use: sanitary waste; confer to specialized and authorized companies, according to current legislation.

Storage:

- Storage: given the type of product, no special storage and storage methods are envisaged.
- Storage temperature: there are no particular limitations.
- Stability: the product is to be considered stable over time, after the first opening.
- Validity: not applicable.
