

# Blood Transportation Bag - BTB

Designed for safe inhouse transport of Blood and Blood Components

## FEATURES

- The BTB has a perforated design and can be opened by authorized health staff at the final destination with no need for special equipment. Once opened, the BTB cannot be resealed.
- The BTB is provided with double-side tape to ensure the safety of blood transportation from the point of origin to its last destination.
- The BTB is produced in 3 layers: a layer of polystyrene foam wrapped with 2 layers of low density polyethylene to ensure mechanical safety and temperature control.
- The complementary information on the front side of the BTB, when correctly filled, will increase the safety of blood transfusion.
- Safety instructions are provided on the rear side of the BTB.
- For longer periods of transportation, please make sure that the BTB is placed inside an insulated and temperature-controlled box.
- Maximum capacity: 1000ml
